The Determinants of the Credit Rating of Local Government Financing Vehicle Bonds in China

Robin H. Luo and Linfeng Chen

Discussant: Xiaoxia Ye
Summary

- Local Government Financing Vehicle Bonds market indeed is a large and important branch of the fast-growing fixed income market in China.
Summary

- Local Government Financing Vehicle Bonds market indeed is a large and important branch of the fast-growing fixed income market in China.

- First of all, well written and informative on the history and background of LGFV in China.
Summary

- Local Government Financing Vehicle Bonds market indeed is a large and important branch of the fast-growing fixed income market in China.

- First of all, well written and informative on the history and background of LGFV in China.

- How to accurately assess the credit risk involved in the market is a critical issue for further development, and is also a technically tough issue for implementation.
Summary

• Local Government Financing Vehicle Bonds market indeed is a large and important branch of the fast-growing fixed income market in China.

• First of all, well written and informative on the history and background of LGFV in China.

• How to accurately assess the credit risk involved in the market is a critical issue for further development, and is also a technically tough issue for implementation.

• This paper does provide some useful insights on this aspect.
• A concern about the dependent variables in the regression model.
Comment

- A concern about the dependent variables in the regression model.
  - Try to establish a relation between some variables and bond ratings using regression.
Comment

- A concern about the dependent variables in the regression model.
  - Try to establish a relation between some variables and bond ratings using regression.
  - However, instead of letting the data tell us the relation, isn’t it more informative if you could let your model tell us the relation?

• Try some other dependent variables that are not outputs of models: defaults (might be very few), returns, etc.
